

**DNA TOKEN**

## INTRODUCTION

**DNA TOKEN is an ERC20 cryptocurrency project. The Smart Contract has been developed by the world class crypto company Brewlabs Inc. Brewlabs is also conducting the launch, LP and the presale buyer airdrops. DNA TOKEN is a passive income generator and has a real world utility in using forensic science and genetic genealogy to solve cold case crimes. As seen in prime time shows like 20/20, Dateline and 48 hrs, our team of forensic scientists will aim to give families who have been affected by serious crimes, a measure of closure.**

**TOKENOMICS**

**1 QUAD TOTAL SUPPLY  
3% MARKETING  
10% ETH DAILY REWARD**

## **CONCLUSION**

**DNA TOKEN is doing its best in promoting inclusion and honest in the cryptocurrency sphere. Bad actors and dishonest people are constantly doing their best to steal from honest investors and promote toxicity in the market. We have invested into Brewlabs to ensure that our project is honest and profitable for all our holders! Thank you for trusting us and giving us a fair opportunity to do something special!**
